

The Barnacle Barrier™ Brief

An Informational Guide to Barnacle Barrier™ Anti-Fouling Systems

Barnacle Barrier™ Portable Anti-Fouling systems are low profile and provide a 100% Eco Friendly boat docking/storage solution. Barnacle Barrier™ will keep the boat bottom spotless and also will considerably reduce electrolysis damage. Barnacle Barrier™ will also reduce any unforeseen electrolysis leakage the boat may have that can damage other surrounding boats. Unlike any form of boat lift, Barnacle Barrier™ does not lift the boat out of the water at all. This system simple goes around the perimeter of the boat and only comes out of the water 3 inches. Barnacle Barrier™ keeps the boat in its own self contained pool of water that prevents any form of bottom growth. This is also great for accidental oil/gas spills/leaks, the barrier will contain any possible spills/leaks for easy clean up.

Considerations for the allowance of Barnacle Barrier™ Anti-Fouling Systems in private and public marinas are as follows:

- Barnacle Barrier™ is not permanent and simply ties to a dock just like the boat does. This system can be moved just as easy as moving the boat.
- This system is extremely low profile and only comes out of the water 3 inches. The system only take up about the same footprint/perimeter space as the boat.
- This system is not a potential danger by lifting the boat out of the water, it also does not change the appearance of a marina.
- Barnacle Barrier™ does not let bottom growth form on the boat bottom, this eliminates potential nuisance caused by mobile bottom cleaning companies. Also, studies show that cleaning/scraping growth from boat bottoms while in the water is harmful to the marine environment.
- Many marina slips are unused since boaters are reluctant to leave their boats in the water where the boat is subject to damaging bottom growth and electrolysis. Barnacle Barrier™ can increase marina slip occupancy.
- This system provides a docking/storage solution that eliminates damaging bottom growth, reduces electrolysis and reduces any unforeseen electrolysis leakage the boat may have that can damage other surrounding boats. This increases the pleasure of boating and directly impacts private marina docking value.
